MESSAGE
from the Regional Director

Greetings!

We are pleased to share with you the 2nd Edition of the MIMAROPA Regional Profile of the Poor. This document is the testament of our commitment in improving the targeting system in the country particularly on poverty mapping and monitoring. This will also serve as a tool for planning, monitoring, and evaluation of social protection programs implemented in the region.

As we publish the Regional Profile of the Poor, we are looking forward to stronger partnerships between the Department and various social protection program implementers and stakeholders by providing relevant and updated statistical literature.

This profile of the poor will provide our partners various information related to the magnitude of the poor and the socio-economic profile of poor households, families, individuals and basic sectors from regional to provincial, municipal and barangay level.

The Listahanan or the National Household Targeting System for Poverty Reduction is an initiative of the Department of Social Welfare and Development to further enhance the delivery of social protection programs and services for the people of MIMAROPA, especially those poor and near poor, vulnerable and disadvantaged adhering our regional vision of reaching the unreached and isolated individuals, families, and communities.

Kudos to the Listahanan MIMAROPA Regional Project Management Office (RPMO)!

NATIONAL HOUSEHOLD TARGETING SYSTEM FOR POVERTY REDUCTION

Prior to 2007, targeting mechanisms in the Philippines were not effective in reaching the poor due to various statistical methodologies. These mechanisms were varied and consequently lack the uniformity and objectivity characteristics of good targeting systems. Example of this method was a self-declaration of income made by the families. However, most of the target beneficiaries belong to the informal sector whose income could not be verified and may change on a different period of time. Thus, several targeting approaches resulted in the inclusion of non-poor beneficiaries and the exclusion of those that need intervention the most.

In 2007, DSWD embarked on a social reform agenda to put into place the main building blocks for a sound social protection system. To achieve its main objective to improve the delivery of social services - DSWD has defined two priorities: (1) design a better targeting system to identify those that need help the most; and (2) design a conditional cash transfer (CCT) program, which would serve as a model program for improving services delivery hence increasing the number of resources going to poor households[i] , thus the NHTS-PR was born.

The National Household Targeting System for Poverty Reduction (NHTS-PR) or the Listahanan is an information management system that identifies who and where the poor are.

NHTS-PR or the Listahanan pioneer database consisting of a comprehensive organization of information of the poor households (HHs) nationwide which makes available to national government agencies and other social protection stakeholders. It aims to: (1) formulate a uniform set of criteria for identifying poor families in the country through scientific means; (2) improve the design of social protection programs to maximize the benefits of the poor; (3) minimize wastage of resources by ensuring that only those who are deserving to benefit from social protection programs; and (4) facilitate sharing of high-quality database to public and private social protection stakeholders.

Listahanan was institutionalized by the Department through Administrative Order No. 1 series of 2008, *"Establishing the National HH Targeting System for Poverty Reduction as the central database of poor HHs in identifying targets for social welfare and development programs and services",* stipulating the adoption and operationalization of HH targeting system using the proxy means test (PMT) and establishment of a database of HHs.

Also, the National Statistical Coordination Board (NSCB) Resolution 18 series of 2009 recognized and enjoining support to the NHTS-PR being implemented by the department as a tool to identify beneficiaries of social protection programs.

By the issuance of Administrative Order No. 2 series of 2009 or the *"Guidelines on the Sharing of Data from the National Household Targeting System for Poverty Reduction",* Listahanan provides the final list of *who and where the poor are* to those stakeholders with approved Memorandum of Agreement (MOA) on data sharing as basis for identifying potential beneficiaries of their programs and services. On the other hand, the establishment of Listahanan is apart from the mandates of Philippine Statistics Authority (PSA) in which to provide official statistics of the country, with relevant information at the aggregate level without divulging the names of the individuals or families as stated under section four (4) of the terms and conditions of the Commonwealth Act No. 591 (August 19, 1940) states *"…nor shall such data or information be divulged to any person except authorized employees of the Bureau of the Census and Statistics, acting in the performance of their duties; nor shall such data be published except in the form of summaries or statistical tables in which no reference to an individual,…"*

Consequently, by virtue of Executive Order No. 867, series of 2010, as stated *"All national agencies (NGAs) are directed to adopt the NHTS-PR as a mechanism in identifying who and where*

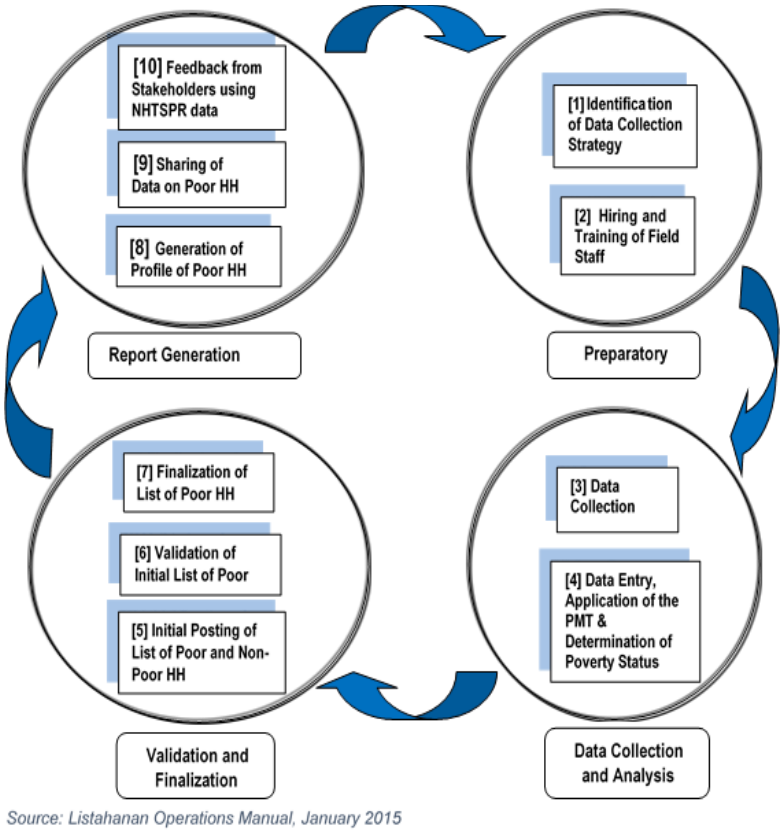
the poor HHs who shall be recipients of social protection programs nationwide are". It mandates all national government agencies (NGAs) to adopt the results of Listahanan in identifying potential beneficiaries for their social protection programs. This gave the responsibility and right to the DSWD to institutionalize the objective identification of poor HHs through Listahanan. The Department as leader in social protection and front-liner of major social welfare and development programs of the government, it is inherent to the department to implement policies and programs in most effective and efficient way.

In 2009 (1st round nationwide HH assessment), Listahanan was able to assess 10,909,456 HHs covering 17 regions, 80 provinces, 137 cities, and 1,493 municipalities nationwide wherein 5,255,118 HHs were identified poor. In MIMAROPA, Listahanan identified 242,633 poor HHs or 47.2% of the 513,759 HHs assessed. Whereas, during the 2nd round HH assessment, the region has identified 221,324 poor HHs, which posted a slight decrease of 8.8% from the 2009 results.

The 2009 Listahanan result was used by the department for the implementation of Pantawid Pamilyang Pilipino Program, universal health care by the PhilHealth, various social protection programs initiated and funded by different local government units (LGUs), civil society organizations and other national government agencies.

1. LISTAHANAN PROJECT CYCLE

Figure 1. Listahanan Project Cycle



Source: Listahanan Operations Manual, January 2015

As mandated also by the EO 867, DSWD shall maintain the system and update Listahanan every four (4) years. As such, 2nd round HH assessment that supposed to be conducted last 2012, commenced last 2015 because of issues in funding and natural calamities that occurred nationwide from 2012-2014. Figure 1 shows the four-phase project cycle for Listahanan 2.

a. **Preparatory Phase.** This involves (a) updating of Proxy Means Test (PMT) (b) identification of areas to be assessed; (c) data collection strategy appropriate for areas identified – *saturation and pockets of poverty;* (d) coordination with the partner-stakeholders such as LGUs, CSOs, national government agencies (NGAs) and tribal groups; and (e) conduct of trainings and orientations for RPMO, training teams, and field staff.

All provinces, cities, and municipalities are covered by the assessment. NHTO, in coordination with Philippine Statistics Authority (PSA), classified and generated the list of all barangays. In rural barangays, all HHs are required to be assessed or saturation. In urban barangays, all HHs in pockets of poverty shall be interviewed. Pockets of poverty are areas in an urban barangay where clusters of poor families reside.

Also, enhancement of information technology systems and Proxy Means Test (PMT), hiring and training of field staff and coordination with LGUs and other project partners are all being done in this phase;

b. **Data Collection and Analysis Phase**. This phase covers house visits to collect basic information of family members using the Family Assessment Form (FAF). During house-to-house assessment, enumerators will interview a qualified respondent[ii] using paper-&-pen or mobile FAF.

Mobile FAF is used in urban barangays. Information in the FAF is encoded (paper-&-pen) or synched (mobile) in the central database for proxy means test (PMT) processing. Mobile assessment is a new mechanism of Listahanan to utilize the information technology for an effective and efficient HH assessment. Then, the estimated HH income is compared with the official provincial poverty threshold provided by the PSA to determine the HH's poverty status.

c. **Validation and Finalization Phase.** The Listahanan gives an opportunity to the community to review the accuracy of the initial list of poor HHs, for transparency and verification purposes. The initial list will be posted in conspicuous places at the barangay for the community to check. This response to the issues of under coverage (HHs who are not enumerated during the data collection phase) and inclusion in non-poor HHs (identified their HHs as poor but tagged as Listahanan non-poor HH). In the areas where the on-demand application (ODA) was applied, households were actively invited to submit applications for assessment. If a household was found not to have been assessed previously, an enumerator was sent to the household to conduct an interview.

Local Verification Committee (LVC) is formed in each municipality to deliberate the received complaints and grievances[iii] and to ensure the integrity of the database of poor HHs before sharing it with the other government agencies and social protection stakeholders.

d. **Reports Generation Phase.** This phase involves the official launching of the Profile of the Poor, data sharing to stakeholders with MOA and collection of feedback on data utilization. As mandated by the Data Privacy Act (DPA) of 2012 or Republic Act No. 10173, names of poor HHs are made available only through a MOA between the department and the requesting party. This ensures that the data will be used only for purposes agreed upon by both parties.

2. PROXY MEANS TEST (PMT)

It has been difficult for developing countries like the Philippines to accurately target the poor HHs given the considerable number of the informal sector, where income tends to vary from time-to-time aside from the fact that no existing proper accounting (in terms of magnitude) of this sector. Using actual income that is difficult to verify, there will be chances of understatement (declared income are lower than their actual income) and overstatement (declared income are higher than their actual income). Thus, instead of using means testing or self-targeting, DSWD preferred proxy variables in targeting poor HHs in the country.

The Proxy Means Test is a statistical model that estimates the income of HHs (HH) using the proxy variables indicated in the FAF where any HH information income such as HH material assets, occupation/ livelihood, educational attainment, housing condition, access to basic services and community characteristics are used to predict income.

Like any statistical model, PMT is not perfect given that it only estimates the HH income. It embedded errors in the statistical formula, known as inclusion and exclusion. *Inclusion error* refers to a true non-poor HH that is classified as poor by the PMT, and *Exclusion Error* refers to a true poor HH that is classified as non-poor by the PMT. These errors are minimized by instituting validation mechanisms of the initial list of poor HHs, tighter supervision controls during the house-to-house data gathering and intense information dissemination through the various media and other advocacy materials.

Given the nature and dynamics of Philippine communities where HH income varies depending on the geographical location and classification, seasonality of catch, nature of business and migration patterns, there is a need to reformulate the PMT model. The period of three (3) to four (4) years matters a lot to accurately determine the poverty status and estimates of HH income that is close to the official statistics of the Philippines issued by the PSA. Table 1 shows the salient features of the old (2009) and new (2015) PMT model used for the 1st and 2nd round HH assessments. These changes are due to the National Capital Region (NCR) where their HHs may have different characteristics compared to other regions.

3. LISTAHANAN IN MIMAROPA REGION

In 2009, during the 1st round HH assessment, the provinces of Occidental Mindoro, Oriental Mindoro, Marinduque, Romblon, and Palawan (MIMAROPA) assessed a total of 513,759 HHs wherein 242,633 are identified as poor. The Listahanan 2 (2015) or the 2nd round HH assessment which conducted from March 2015 until the end of December 2015, covered five provinces, two cities, 71 municipalities and 1,459 barangays in eight congressional districts with 584,562 HHs assessed. This posted a 13.8% increase from the assessed HHs during the 2009 Listahanan.

A total of 221,324 were identified poor HHs who could be potential beneficiaries of all National Government Agencies (NGAs) for their social protection programs such as PhilHealth, Pantawid Pamilyang Pilipino Program, Sustainable Livelihood Program, Social Pension and other social protection programs of LGUs and other stakeholders.

A total of 1,772 field staff throughout the five provinces are capacitated to complement the required manpower of the region. Listahanan field staff were able to reach the far-flung areas and those isolated municipalities, barangays and sitios such as Brgy Mangsee in Balabac, Palawan which is close to Malaysia; a newly discovered community of indigenous peoples (IPs) in Brooke's Point, Palawan and the isolated municipality of Cagayancillo, Palawan in Central Sulu Sea. The RPMO also conducted the HH assessment in the municipality of Kalayaan, Palawan[iv].

Likewise, HHs situated in geographically isolated and disadvantaged areas (GIDAs) and hinterlands were also reached by the Listahanan enumerators, compared to any other institutions that conducted surveys. To name a few, the sitios in Sta. Cruz, San Jose and Rizal, Occidental Mindoro, HHs inside the sanitarium in Culion, Palawan and penal colonies in Sablayan, Occidental Mindoro and Puerto Princesa City, Palawan which resulted to the extensive breadth of Listahanan database.

The strategies of reaching the unreached and isolated were done through the collaboration and coordination of the Department's regional project management office (RPMO), partner LGUs, other NGAs, CSOs and Armed Forces of the Philippines (AFP). The coordinated efforts of various stakeholders resulted in Listahanan generating roughly Php2.7M for the remuneration, transportation, and other operational expenses, as part of the resource augmentation.

The Listahanan second round HH assessment had given the chance to RPMO MIMAROPA to pilot test the proposed Community-Based Validation System (ComBased Validation) developed by the RPMO as an alternative mechanism to local verification committee (LVC) validation procedure. In LVC committee, membership is coming from the office of the chief executive with additions from the concerned sectors and agencies as deemed necessary. While ComBased validation system will maximize the existence of community barangay assembly and Barangay Local Development Council (LDC).

This remarkable innovation of MIMAROPA was pilot-tested in selected barangays in Oriental Mindoro, Palawan, and Romblon exploring the possibilities of adapting the procedure at the national level for nationwide implementation. The ComBased Validation pilot testing has showcased the community participation and transparency in the process of validating the initial results of poor HHs at the barangay level during the Listahanan third phase of implementation cycle – the validation phase.

4. THE PROFILE OF THE POOR

The results of the 2015 Listahanan HH assessment will give us the picture and some points of comparisons on the 2009 and 2015 database. It also gives us evidence-based statistics on how the government's initiatives on social protection interventions posed a positive or negative effect on the magnitude of the poor in the region.

In identifying poor, the estimated income of a household from the results of the PMT is compared to the provincial poverty threshold[v] set by the PSA. As defined by the Republic Act No. 8425 or the Social Reform and Poverty Alleviation Act, poor refers to individuals and families whose income fall below the poverty threshold as defined by the PSA and/or cannot afford in a sustained manner to provide their minimum basic needs of food, health, education, housing and other essential amenities of life.

This Profile of the Poor focuses on categorical numerical and socioeconomic variables. Major discussions also highlight on HH member's highest educational attainments, occupation; housing structures and access to basic services and facilities like water, electricity, health, and sanitation; HHs' ownership of assets; tenurial status and some pointers and inputs on disaster management, and population dynamics.

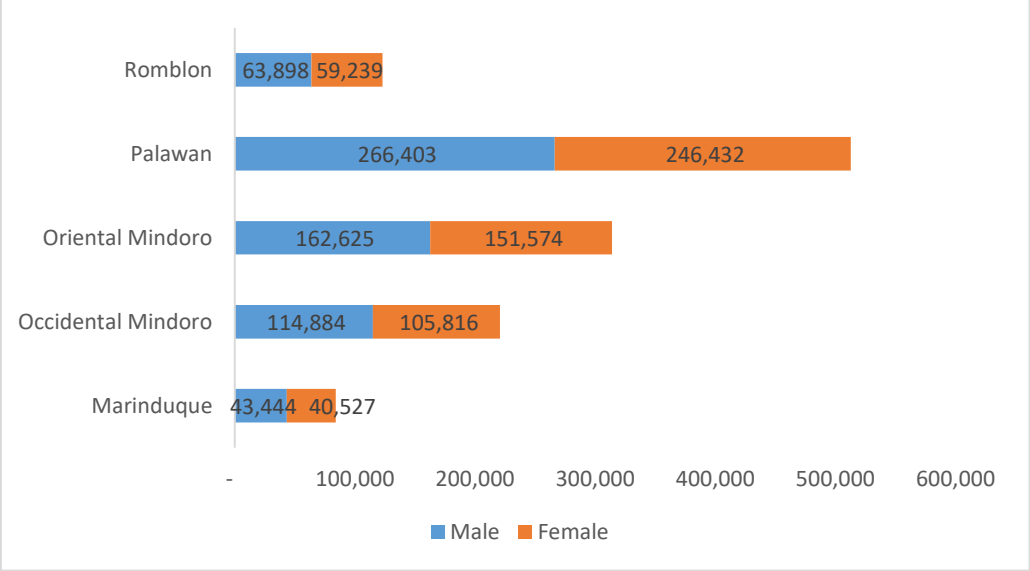
WHO AND WHERE THE POOR ARE?

1. DEMOGRAPHY OF POOR HOUSEHOLDS

1.1. Age Structure and Sex Composition

A total of **1,254,842 poor individuals** comprise the 221,324 HHs identified as poor which 603,588 (48.1%) are females and 651,254 (51.9%) are males. This is 47.4% of the total 2,645,643 assessed individuals throughout the region.

Figure 2. Number of Poor Male and Female (all ages), per province



Source: 2015 Listahanan database

Figure 2 shows that among the five (5) provinces in MIMAROPA, Palawan posted the highest number of poor male with 266,403 (51.9%) and female with 246,432 (48.1%), seconded by Oriental Mindoro with 162,625 (51.8%) and 151,574 (48.2%) poor male and female, respectively. It is noted that these two (2) provinces have the highest number of population based on the results of the 2015 census of population conducted by PSA.

Similarly, the 2nd district of Palawan has the most number of poor individuals of 228,254 (61.7% of assessed individuals in the district), trailed by the lone district of Occidental Mindoro (220,700 poor individuals or 52.1%) and first district of Palawan (202,448 poor individuals or 52.1%).

Moreover, among the cities and municipalities in MIMAROPA, Puerto Princesa City has the highest number of poor individuals (64,127 or 42.4% of assessed individuals in the city), followed by the municipalities of San Jose, Occidental Mindoro (60,042 poor individuals or 55.0%); Taytay, Palawan (46,435 poor individuals or 61.3%); and Bataraza, Palawan (44,427 poor individuals or 61.3%).

Furthermore, Brgy. Bancalaan, Balabac, Palawan also has the highest number of poor by individuals (11,165 poor individuals or 84.1% of assessed individuals in the barangay), followed by Brgy. Mangsee, Balabac, Palawan (8,069 poor individuals or 79.7%) and Brgy. Panaytayan, Mansalay, Oriental Mindoro (8,042 poor individuals or 90.9%).

1.2. Ethnicity

Table 2. **Top 10 ethnic groups with the most number of poor HHs in MIMAROPA**

Ethnic Group	Marinduque	Occidental Mindoro	Oriental Mindoro	Palawan	Romblon	Total

Source: Listahanan database, 2015

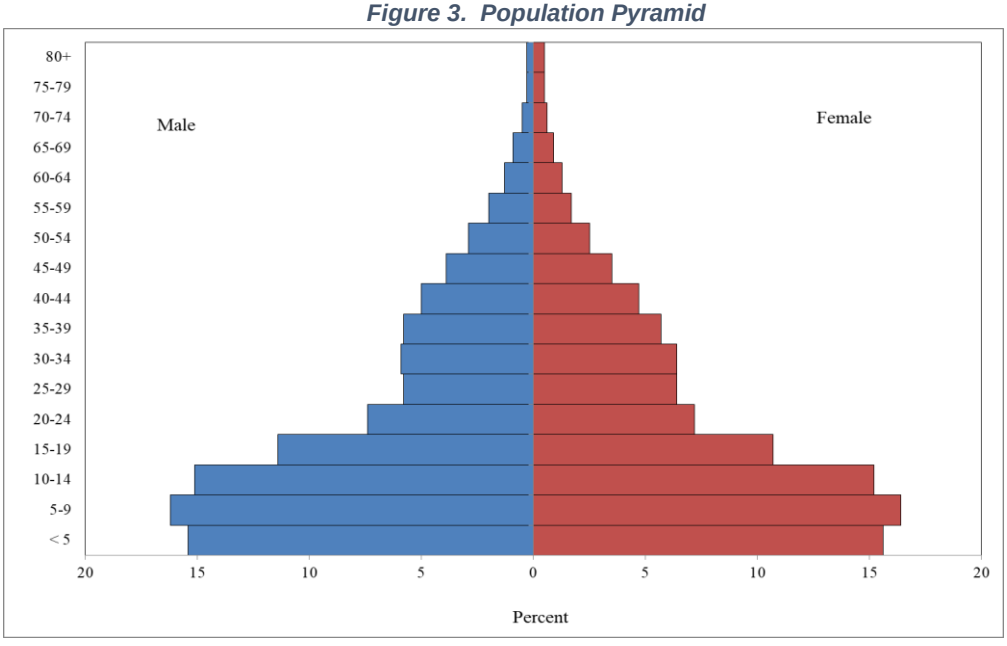
As shown in Table 2, Mangyan tops the list of ten (10) major ethnic groups[vi] found in MIMAROPA with the most number of poor households. Mangyan is the collective name for eight (8) ethnic groups residing in the provinces of Mindoro, namely: Iraya, Alangan, Tadyawan, Tawbuid Buhid, Hanunoo, and Ratagnon.

Among poor HHs in MIMAROPA, 18,198 classified their HHs as Mangyan, which 9,800 (53.9%) are residing in Oriental Mindoro and 7,566 (41.6%) in Occidental Mindoro. Also, 817 (4.5%) poor Mangyan HHs are found in the province of Romblon and 14 (0.07%) in Palawan.

Moreover, seven (7) out of ten (10) groups are found in the province of Palawan and the last two are mostly found in the province of Romblon.

1.3. Population Dynamics

Figure 3. Population Pyramid



Source: 2015 Listahanan database

Poor individuals in MIMAROPA are relatively young as shown in Figure 3 that the population pyramid has a broad base. Age groups 5-9, 0-4 and 10-14 years old have the largest

percentage of the total poor individuals for both male and female. It is also observed that the population pyramid is slowly narrowing to the older age groups that indicated a low proportion of elderly. This indicates that high birth and death rates have a significant impact on the manpower and labor force of the region.

The total poor male and female resulted in a sex ratio of **108 poor males for every 100 poor females**, it is lower than the results of 2009 Listahanan sex ratio of 109.

Table 3. **Sex ratio per age group**

Age Group	Male	Female
All Ages	**108**	**100**
0-14 YO	107	100
15-64 YO	110	100
65 YO and above	89	100

Source: Listahanan database, 2015

As shown in Table 3, children aged below 15 years old has a sex ratio of 108 poor males for every 100 poor females while for those aged between 15 years old and 64 years old was 110 poor males for every 100 poor females. The sex ratio for the age group of 65 years old and over was 89 poor males for every 100 poor female, depicting higher mortality of males than females in this age group.

The province of Occidental Mindoro has a sex ratio of 109 while the Oriental Mindoro and Marinduque has a sex ratio of 107. Whereas the provinces of Palawan and Romblon have the sex ratio as same as the regional results.
